## background

No matter what your field of study, you can help others to live longer healthier lives by working in New Jersey's blossoming bioscience industry. New Jersey's bioscience industry is thriving because of the availability of career opportunities and the strong educational infrastructure in the state. In fact, New Jersey is home to over 200 biotechnology companies, 15 of the world's 20 largest pharmaceutical, medical technology, and diagnostics companies, and over 40 universities and colleges that provide the training you need to succeed in the field.

Having a foundation in the sciences can lead to exciting and promising career options! You will see that there are many jobs, at many different levels, that work together to perform a core function for an organization. You may decide to work your way up the ladder in one functional area or you may explore several different areas. The choice is yours!

This brochure highlights a few of the jobs that are available in each area of a typical large company in the bioscience industry. We provide information about various jobs and educational opportunities available in New Jersey. We have identified six key job families, and several examples of jobs, and provided descriptions of the educational requirements, salary ranges, and experiences needed to obtain the jobs.

Although this brochure highlights jobs that are often found in large pharmaceutical and biotechnology companies, you may also choose to work in education, a small to medium sized company, a government agency, or for yourself as an entrepreneur. You will find more information about these jobs as well as listings of additional jobs, career videos, and links to the universities and colleges that can prepare you for work in the biosciences at [www.bio-one.org](http://www.bio-one.org).

**The bottom line? There are thousands of career and educational opportunities waiting for you in New Jersey!**

### Acknowledgments:

This initiative was funded by Bio-1, Central New Jersey's Workforce Innovation Regional Economic Development (WIRED) program from the U.S. Department of Labor. The John J. Heldrich Center for Workforce Development at Rutgers, The State University of New Jersey, collected career information, conducted interviews, facilitated focus groups, and developed the brochure, all building on the information gathered by the Life Science Career Alliance, Philadelphia, PA.

The Bio-1/Heldrich Center team is especially grateful to the representatives of the industry organizations, pharmaceutical and biotechnology companies, and universities and colleges who actively participated in the development of the content. Additionally, we would like to thank the high school students who provided feedback on layout and design. Finally, we would like to thank David Ogunrinde, who was the creative director & designer for this brochure.
